

# RESTFUL API

Roderick Fanou, Amogh Dhamdhere,  
Bradley Huffaker, Ricky Mok, David Clark, and Kc Claffy

**[manic-info@caida.org](mailto:manic-info@caida.org)**

AIMS 2019

# Project

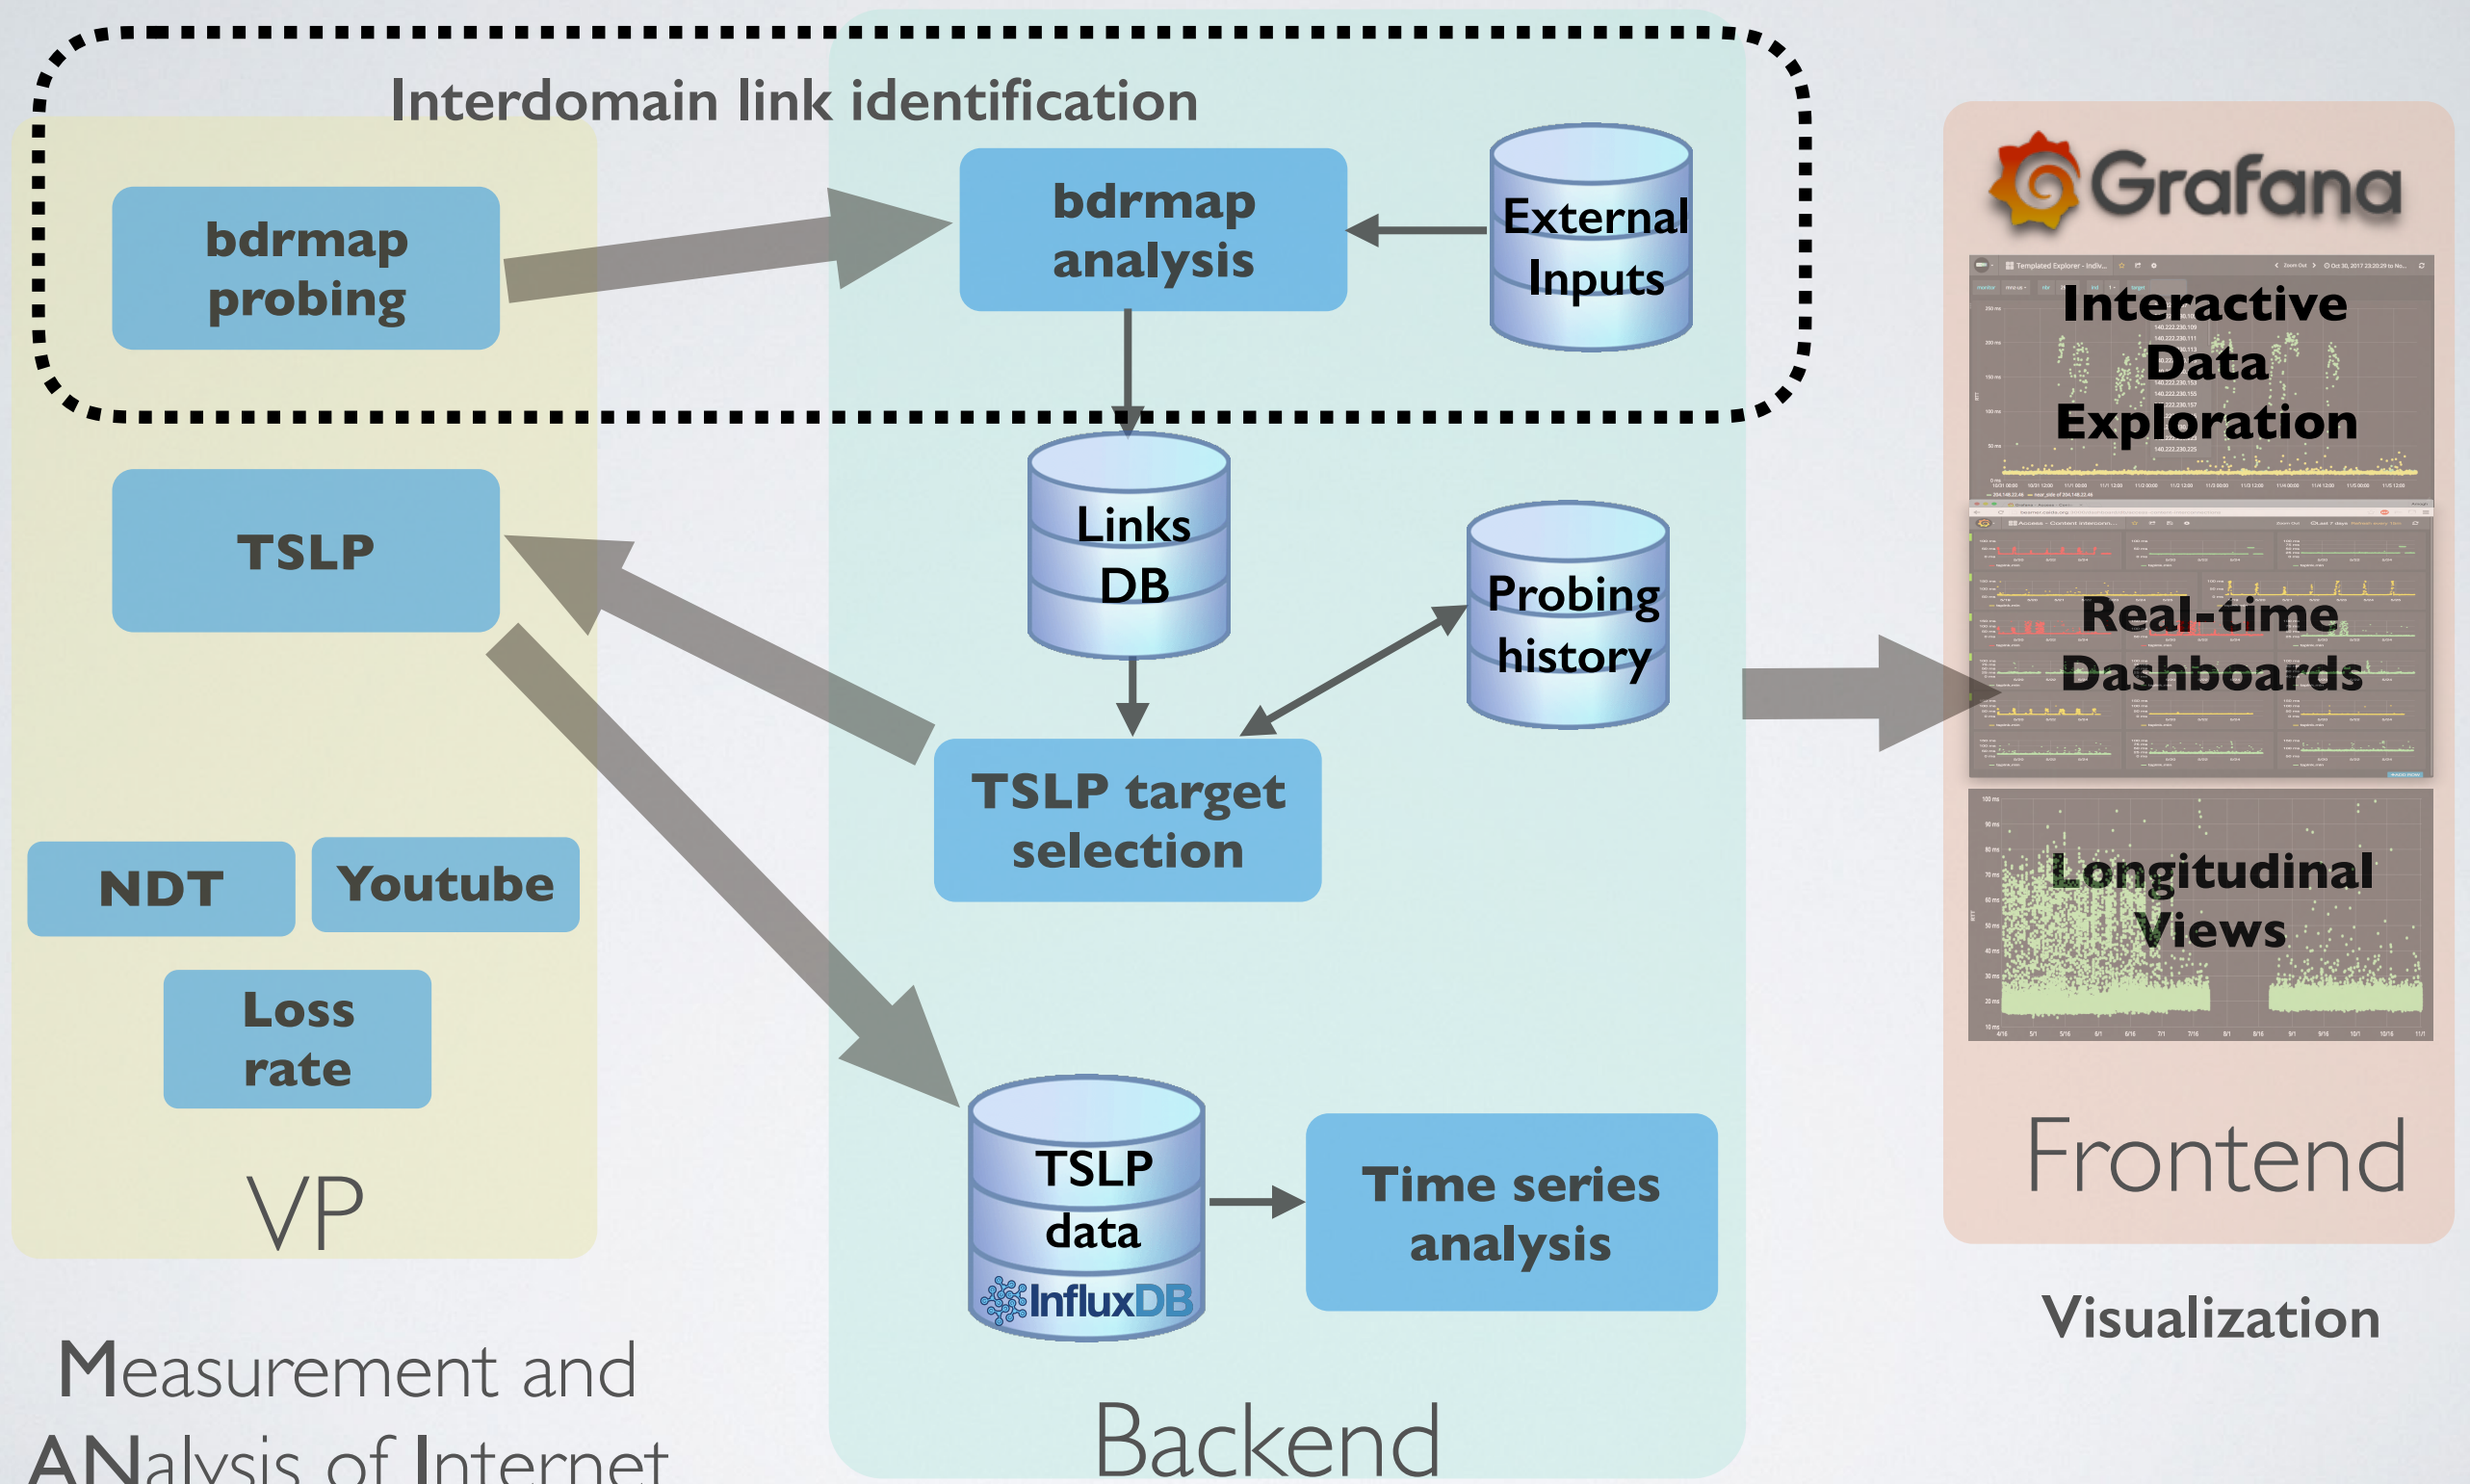

- **M**easurements and **A**nalysis of **I**nternet **C**ongestion
  - ✓ <https://manic.caida.org/>
- CAIDA developed the MANIC System prototype
  - ✓ to monitor interdomain links and their congestion state
  - ✓ to provide empirical grounding to debates related to interdomain congestion

Dhamdhere *et al.*, Inferring Persistent Interdomain Congestion, SIGCOMM 2018

# System

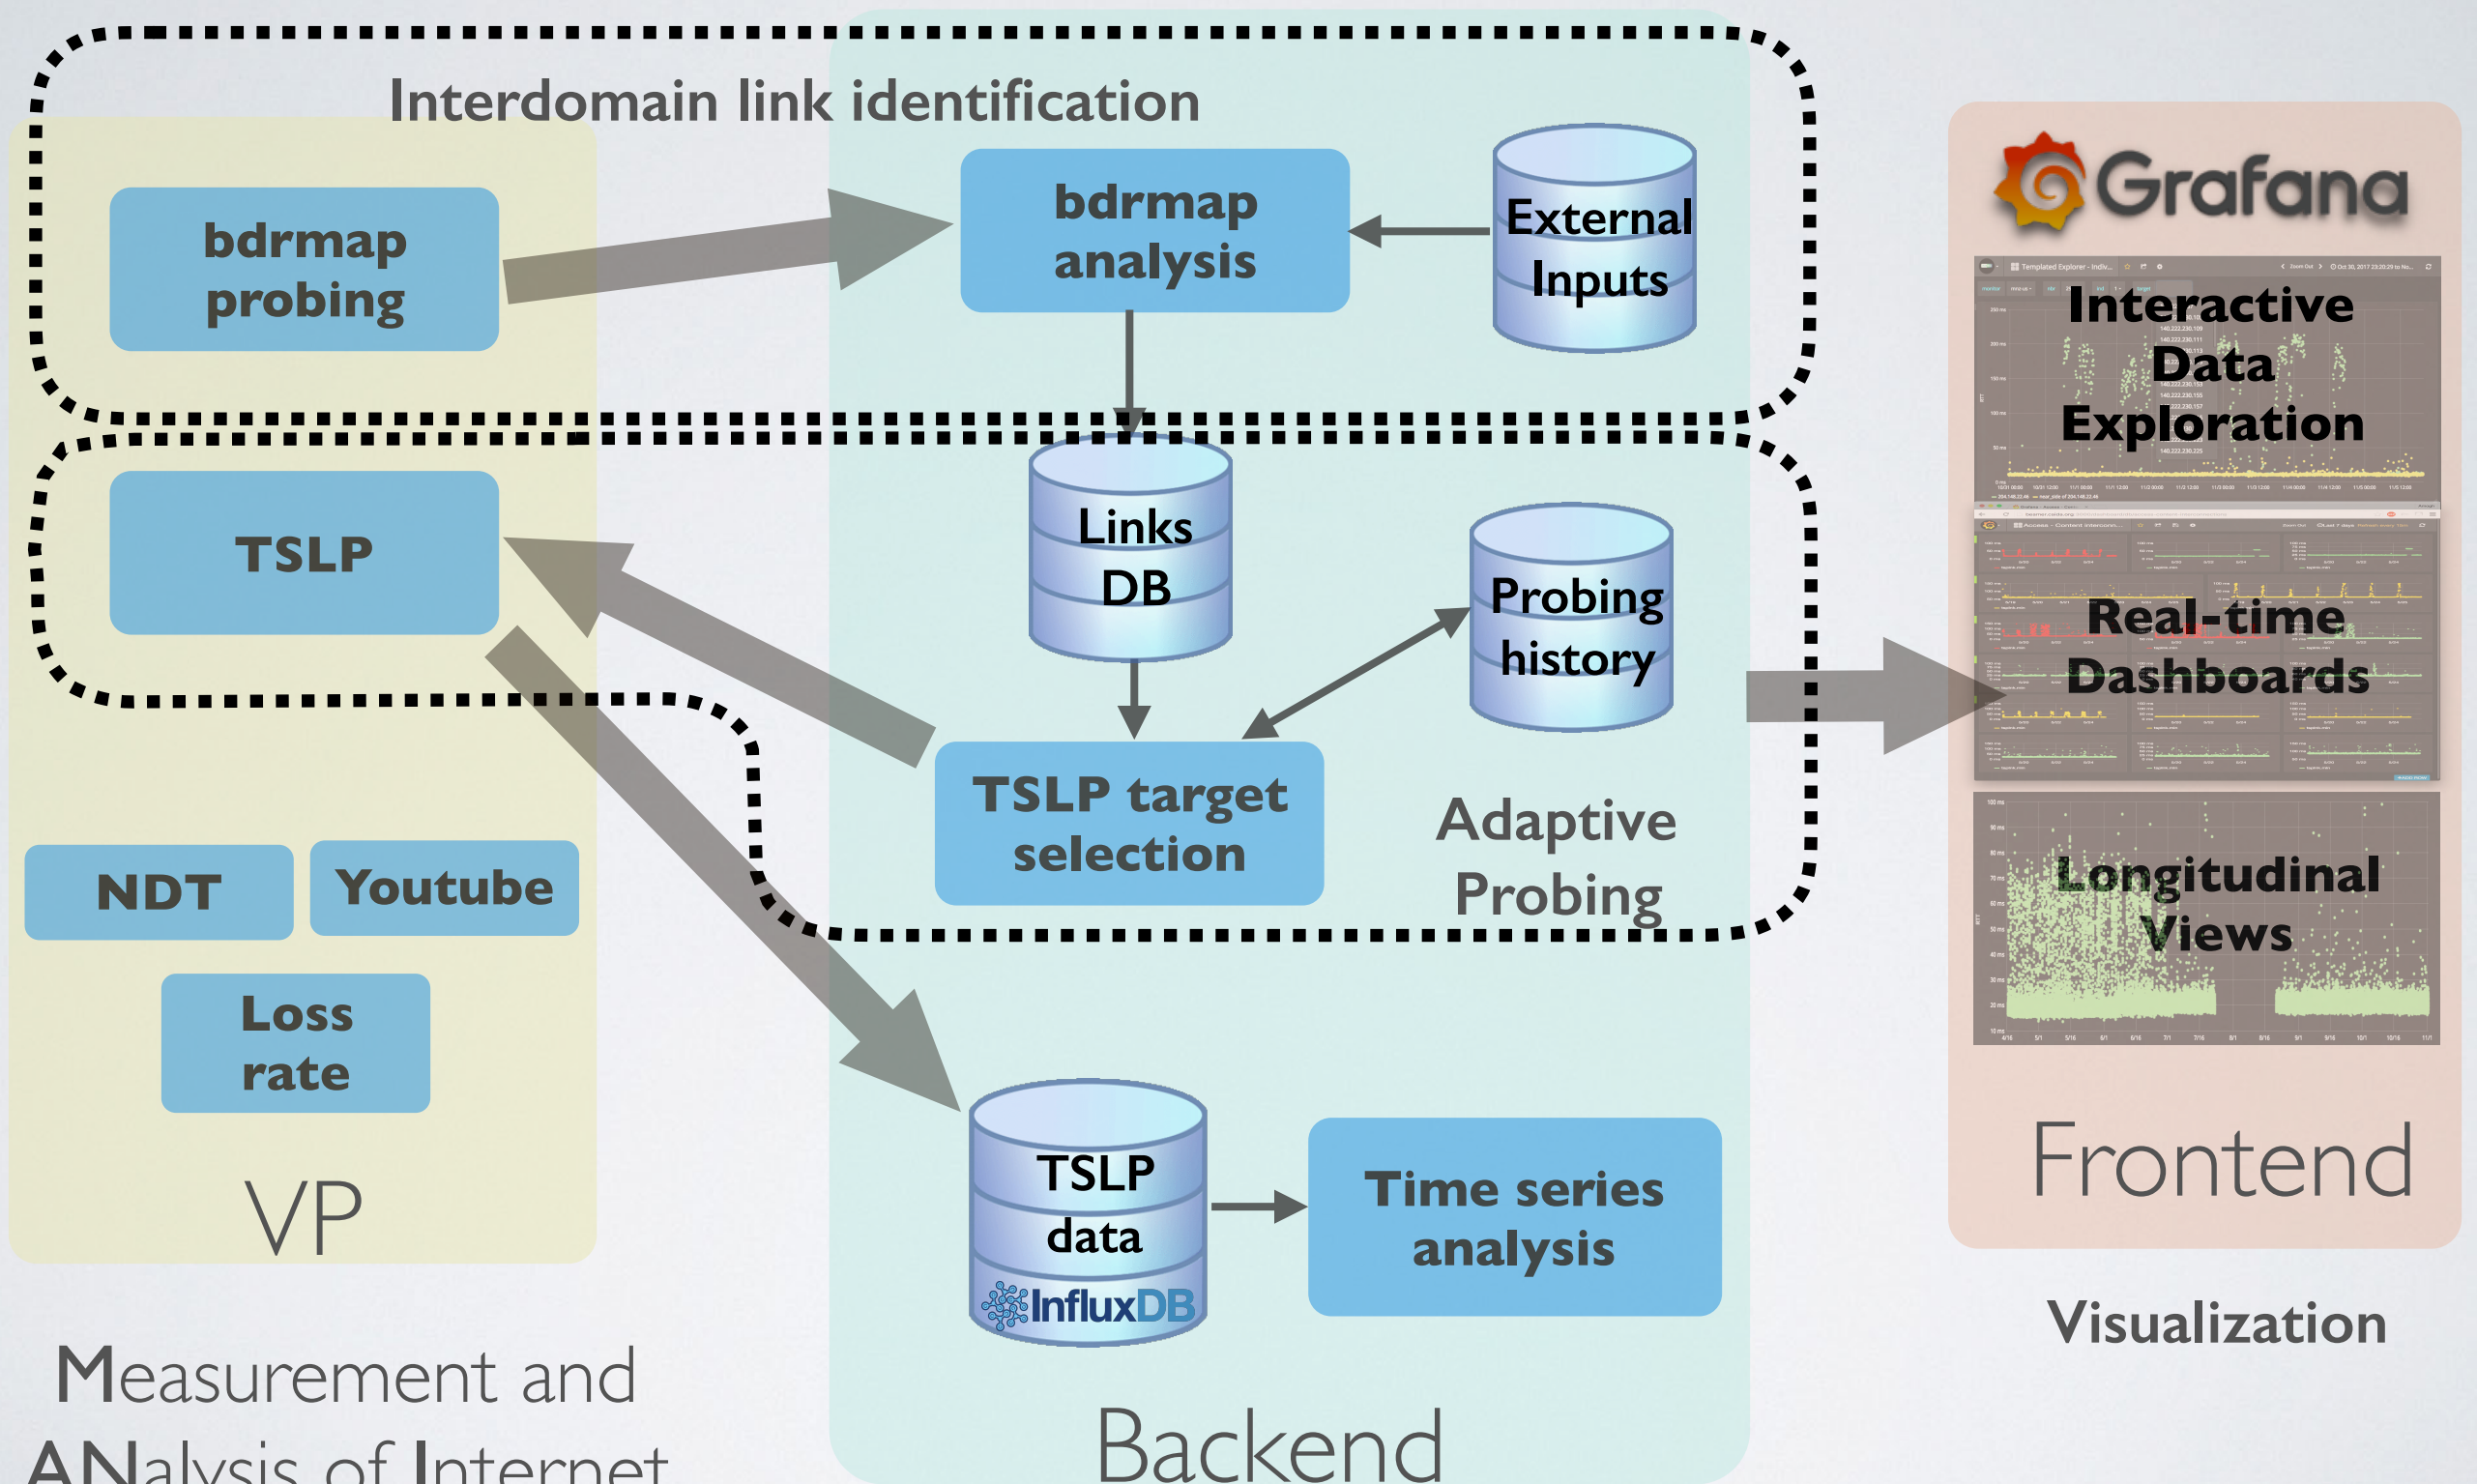

Measurement and  
ANalysis of Internet  
Congestion\*

# Time Series Latency Probes (TSLP)

*(repeat to obtain a timeseries)*

# Time Series Latency Probes (TSLP)

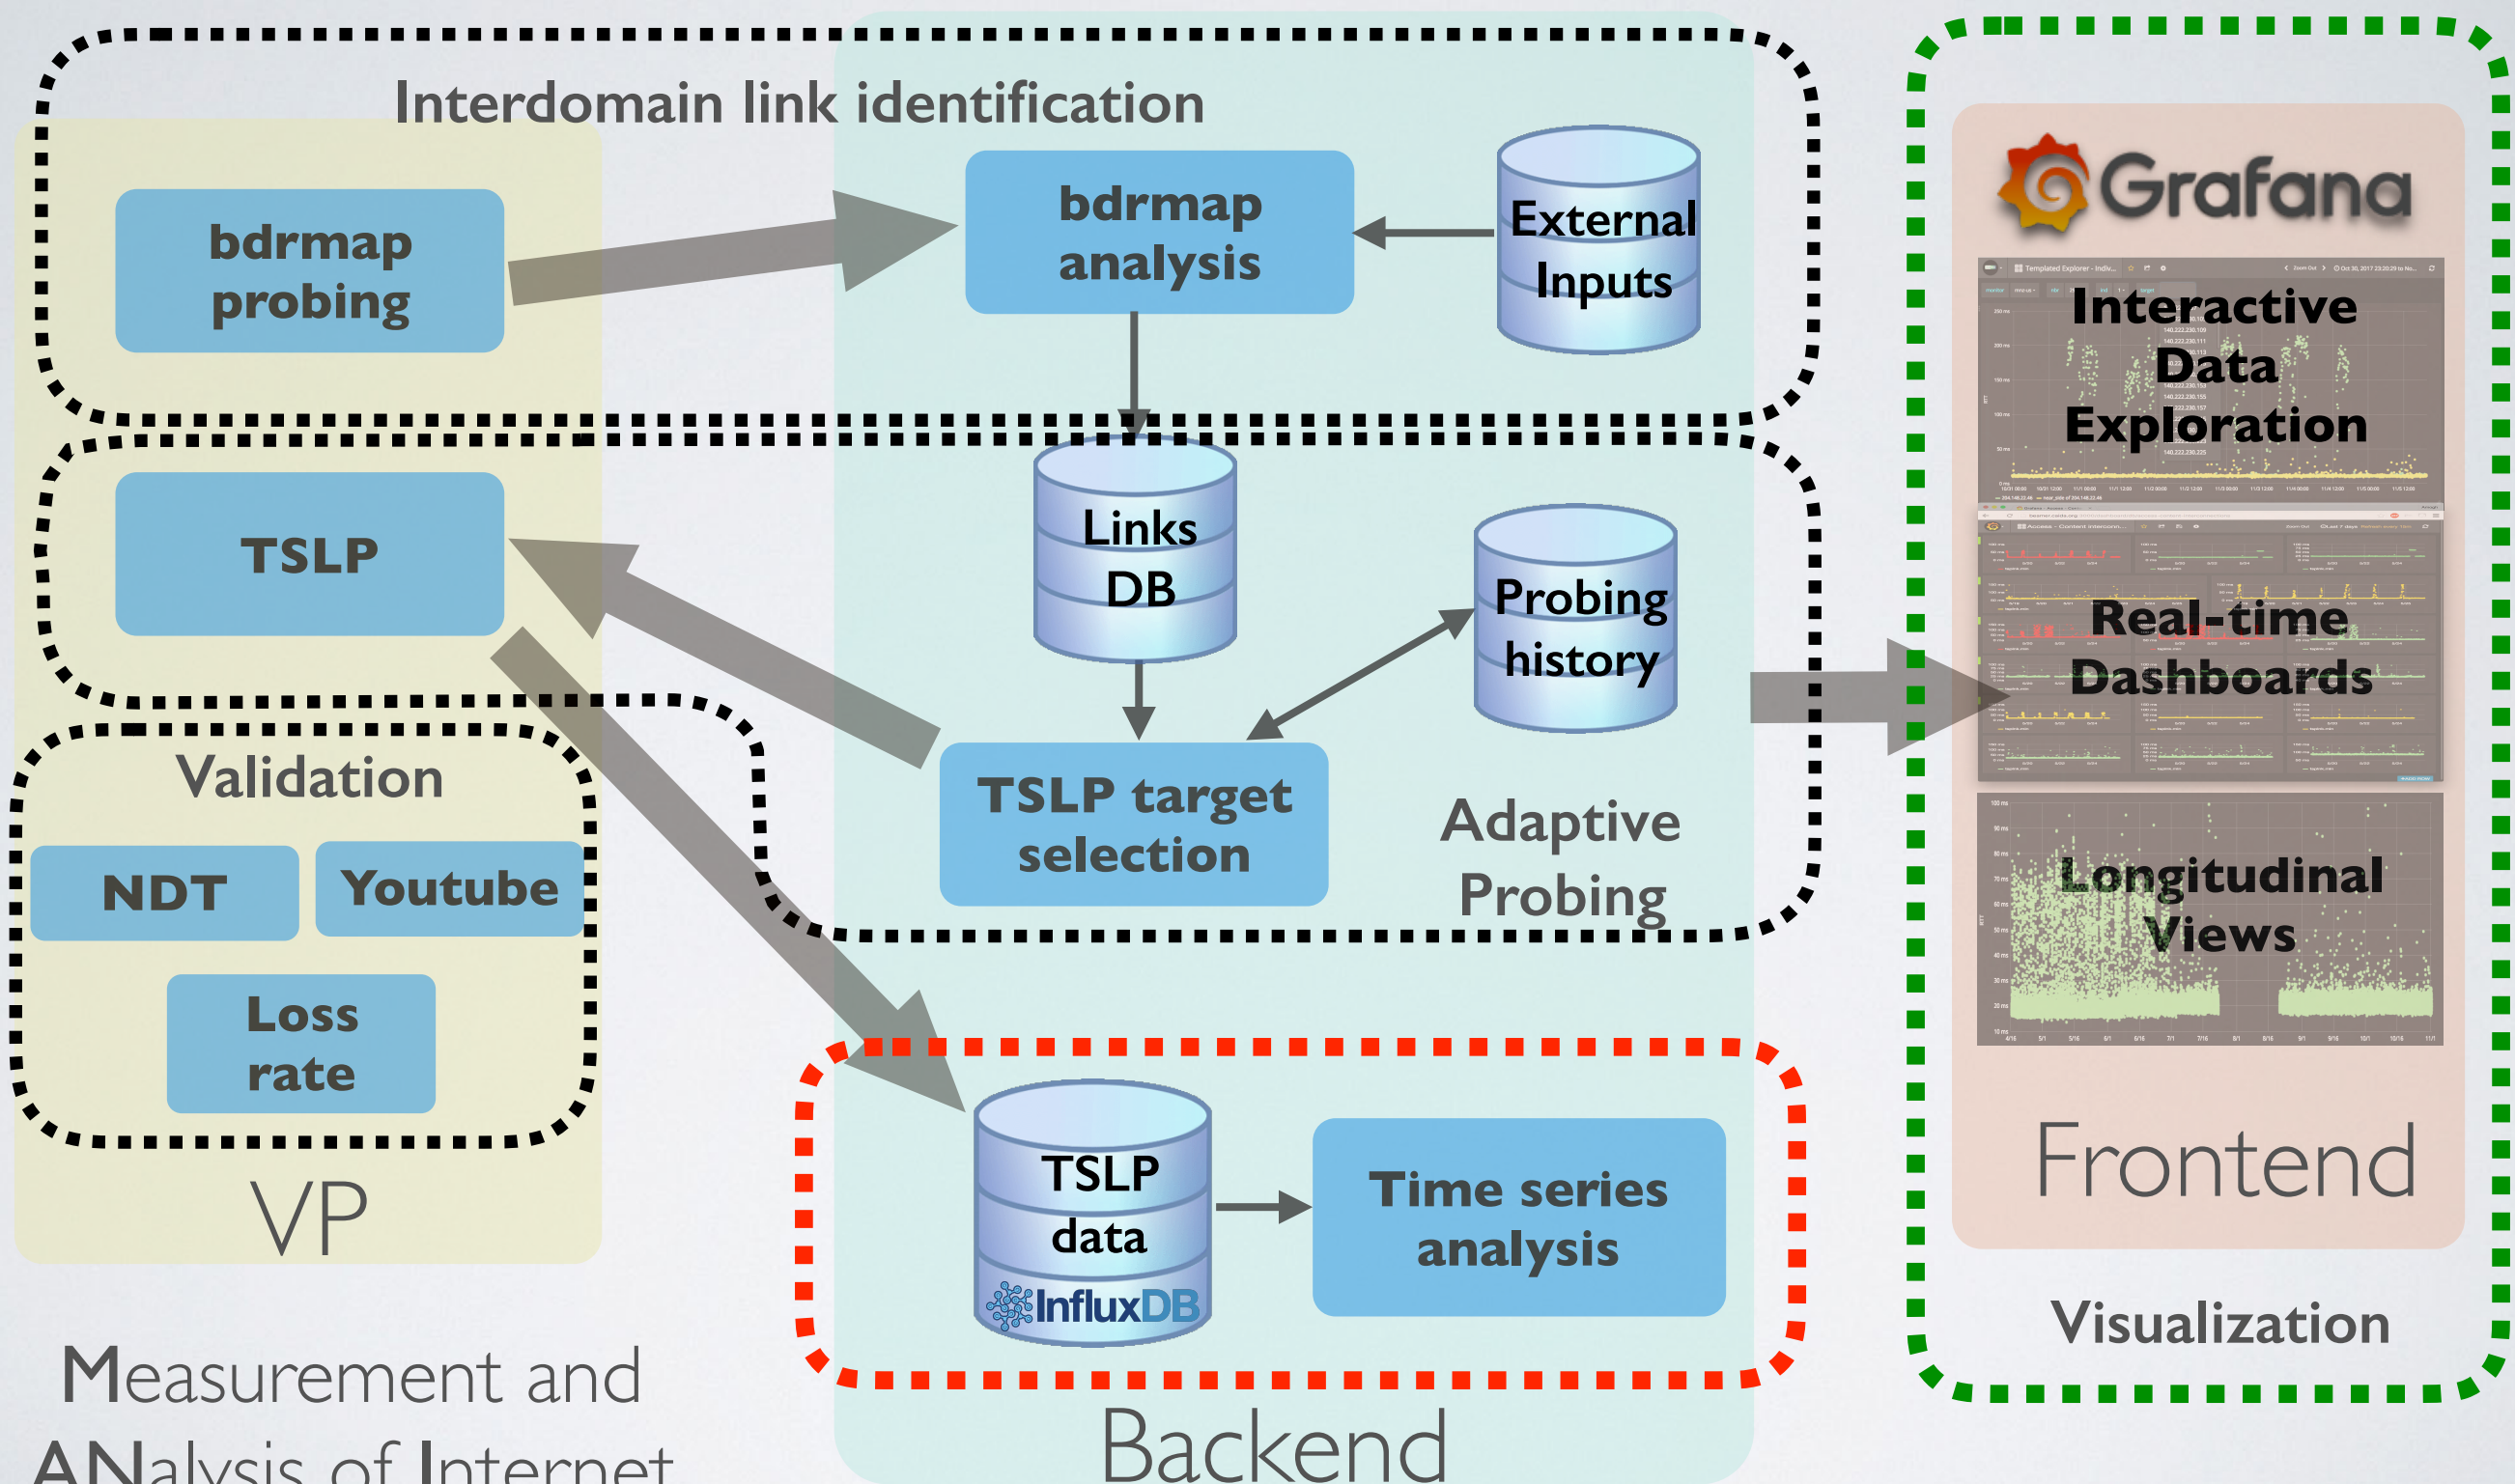

Latency elevation on the “far” time series,  
but no elevation on the “near” time series

**target link likely congested**

# MANIC System

Measurement and  
ANalysis of Internet  
Congestion [1]

**Goal: Make TSLP measurements publicly available**

# MANIC Dataset Description

*Which data are we making accessible?*

- Coverage: from March 2016 to present
- List of **V**antage **P**oints (**VPs**) running TSLP measurements and their related infos
- ASNs discovered as neighbors (far ASNs) of VP hosts (near ASNs)
- Interconnections links between near and far ASNs
- RTTs to both ends of those links every 5min/15min
- Inference of evidence of congestion based on time series analysis, etc.

# Motivation to build API

*Why is MANIC API needed?*

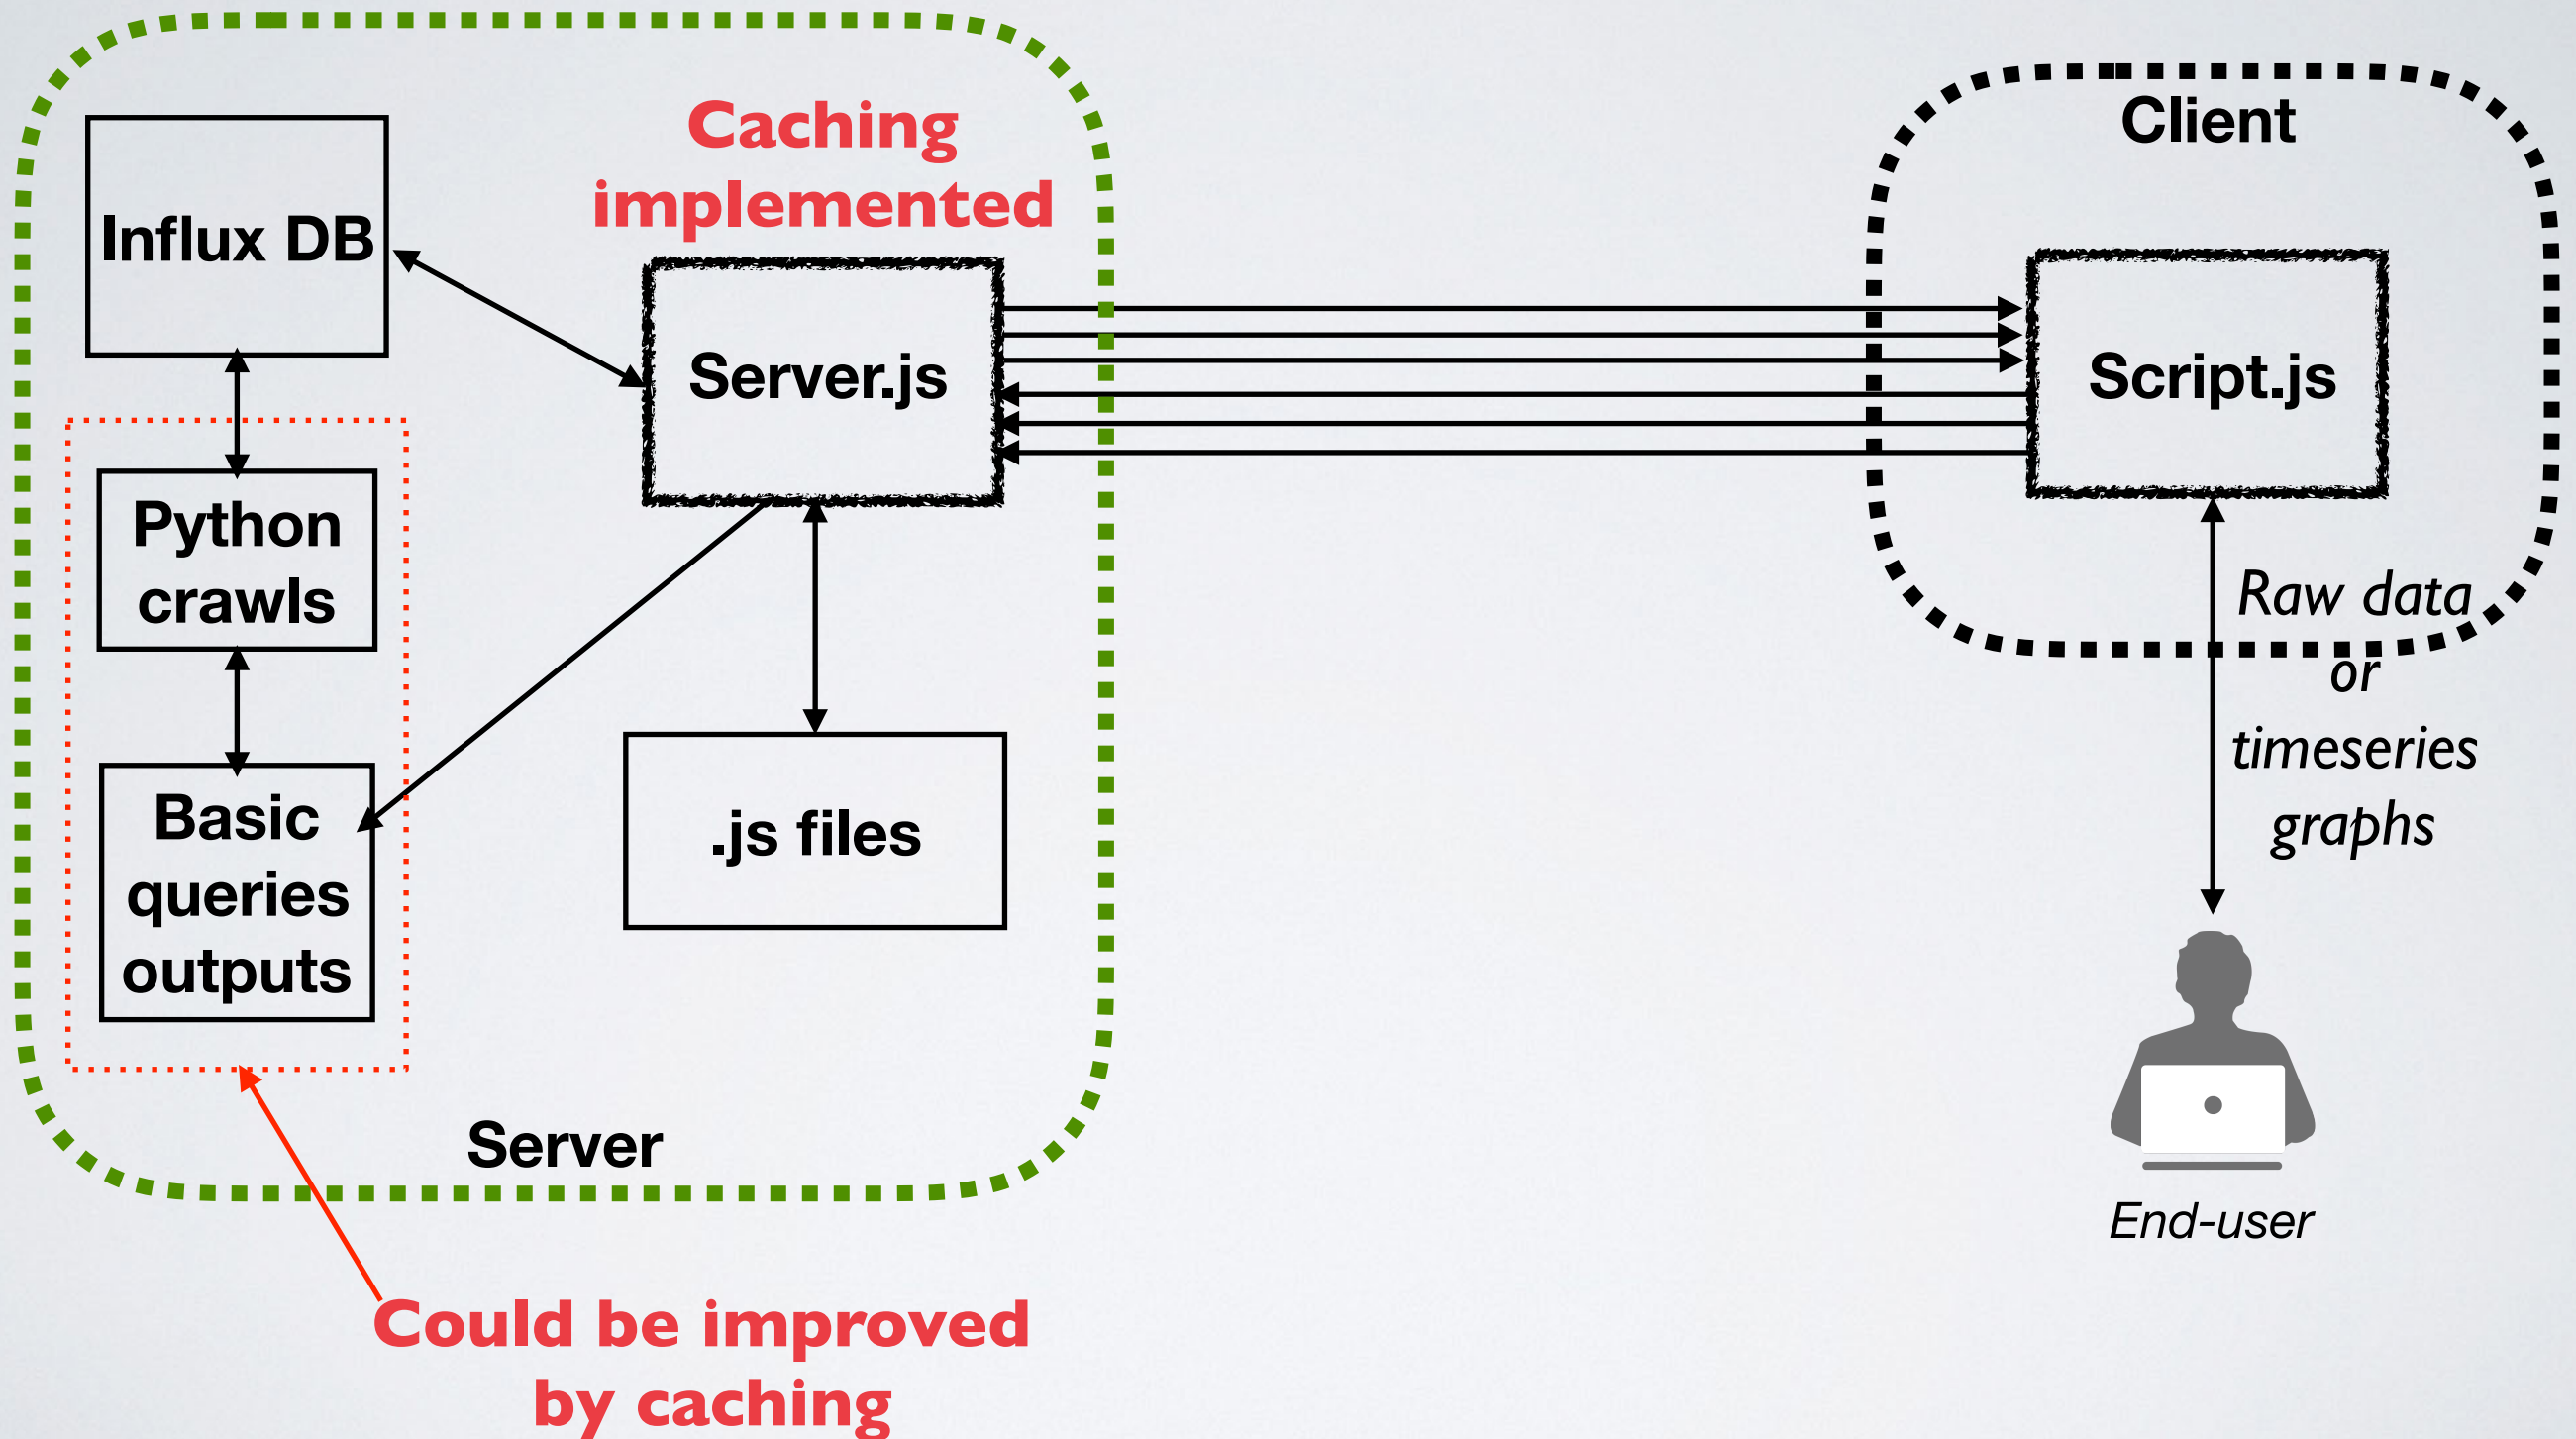

- Facilitate re-use of the data by researchers and others
- Enable integration of MANIC system with other CAIDA systems (AS rank, IODA, HI-CUBE etc.)
- Build a platform for easily investigating measurement-related questions in the context of **PANDA** project (**P**latform for **A**ppplied **N**etwork **D**ata **A**nalysis)
- Add to Grafana front end new plugins that use the API

# Background & Challenges

- **Data Structure**
  - ✓ 540G of TSLP measurements data are stored in the time series database Influx DB
  - ✓ They are structured into *measurements* (tables)
- **Design challenges**
  - ✓ Selecting endpoints to support
  - ✓ Selecting output formats
  - ✓ Consistency with other existing and emerging CAIDA APIs
  - ✓ Should APIs have a layered structure or directly access one another's DB?

# Operational Architecture

# Technical choices & API Specification

- Documented at <https://api.manic.caida.org/v1/>
- Languages: NodeJS, Javascript, HTML, Python, Plotly
- Output pagination retained
- Endpoints supported: /asns; /monitors; /iplinks; /rtt; /asrt; /group\_ids
- Users can refine queries using documented parameters: ?near\_org\_asn; ?far\_asn; ?start; ?end; ?page, etc.

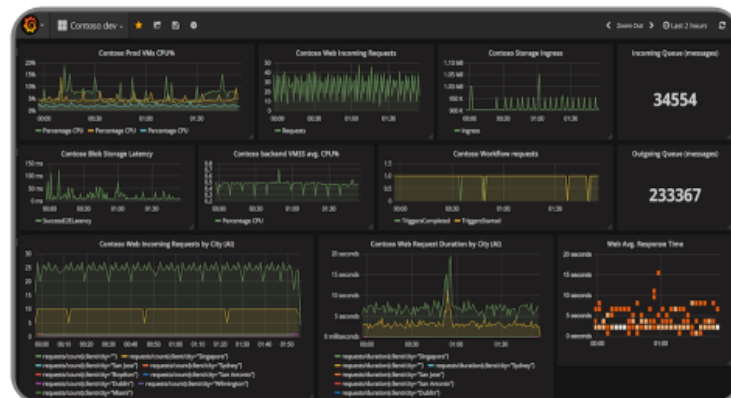

# Demo

## Measurement and ANalysis of Internet Congestion

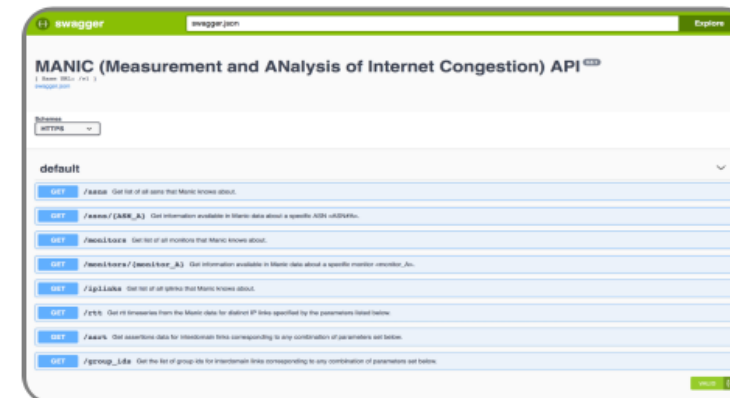

### Time series front end

This Grafana front end contains dashboards depicting latency time series to the endpoints of interdomain links collected as part of the TSLP measurements. For access to the dashboards, contact [manic-info@caida.org](mailto:manic-info@caida.org)

### Manic API Documentation

This webpage presents the Manic-API documentation implemented with Swagger, which allows users to experiment with queries through the API.

# Use cases

- [Early Jan, 2019] CableLabs **checks** whether **TSLP-based congestion indicators** correlate with **link utilization**
- [Ongoing] UCSD grad student (Ben Du) **geolocating both sides of interconnection links** of MANIC
- [Ongoing] IMT Atlantique **applying method for statistical characterization of RTT series** [5, 6]. We hope to compare to our 2018 approach of detection of evidence of congestion\*

\*Mouchet, et al., Statistical Characterization of Round-Trip Times with Nonparametric Hidden Markov Models. AnNet 2019.

# Example of API Usage (I)

- Scenario I: Collect TSLP measurements outputs for IP links between Comcast-CableLabs during the previous month; compare them to those of Comcast-Netflix.
  - ✓ RTT to both sides of the IP links between AS7922 (Comcast) - AS20381 (CableLabs-LV)
    - [https://api.manic.caida.org/v1/rtt?near\\_org\\_asn=7922&far\\_asn=20381&start=now-2m&end=now-1m](https://api.manic.caida.org/v1/rtt?near_org_asn=7922&far_asn=20381&start=now-2m&end=now-1m)
  - ✓ RTT to both sides of the IP links between AS7922 (Comcast) - AS2906 (Netflix)
    - [https://api.manic.caida.org/v1/rtt?near\\_org\\_asn=7922&far\\_asn=2906&start=now-2m&end=now-1m](https://api.manic.caida.org/v1/rtt?near_org_asn=7922&far_asn=2906&start=now-2m&end=now-1m)

# Example of API Usage (2)

- Scenario 2: Fetch the list of far ASNs and IP links discovered and measured by Manic
  - ✓ List of far ASNs observed from monitor bed-us in the last 7 days
    - [https://api.manic.caida.org/v1/asns?observed\\_from\\_monitor=bed-us&is\\_far\\_asn=true&start=now-7d](https://api.manic.caida.org/v1/asns?observed_from_monitor=bed-us&is_far_asn=true&start=now-7d)
  - ✓ List of far ASNs observed from monitor bed-us through the far IP 96.87.11.70 during the last 7 days
    - [https://api.manic.caida.org/v1/asns?observed\\_from\\_monitor=bed-us&far\\_ip=96.87.11.70&is\\_far\\_asn=true](https://api.manic.caida.org/v1/asns?observed_from_monitor=bed-us&far_ip=96.87.11.70&is_far_asn=true)
  - ✓ IP links whose sides were measured during diverse periods
    - <https://api.manic.caida.org/v1/iplinks>
    - [https://api.manic.caida.org/v1/iplinks?observed\\_from\\_monitor=san4-us&start=now-3m&end=now-2m](https://api.manic.caida.org/v1/iplinks?observed_from_monitor=san4-us&start=now-3m&end=now-2m)

# Showcase of the API Usage (3)

- **Scenario 3: Fetch RTT to both sides of IP links between:**
  - ✓ **AS7922(Comcast) - AS15169(Google) seen from monitor bed-us during Jan 31- Dec 31, 2017**
    - [https://api.manic.caida.org/v1/rtt?near\\_org\\_asn=7922&observed\\_from\\_monitor=bed-us&far\\_asn=15169&start=20170131&end=20171231&far\\_ip=23.30.206.122&page=1](https://api.manic.caida.org/v1/rtt?near_org_asn=7922&observed_from_monitor=bed-us&far_asn=15169&start=20170131&end=20171231&far_ip=23.30.206.122&page=1)
  - ✓ **AS22773(Cox) - AS15169(Google) seen from monitor san2-us during Jan 1- April 10, 2019**
    - [https://api.manic.caida.org/v1/rtt?near\\_org\\_asn=22773&observed\\_from\\_monitor=san2-us&far\\_ip=98.182.1.86&far\\_asn=15169&start=20190110&end=20190410](https://api.manic.caida.org/v1/rtt?near_org_asn=22773&observed_from_monitor=san2-us&far_ip=98.182.1.86&far_asn=15169&start=20190110&end=20190410)
  - ✓ **AS22773(Cox) - AS32934(Facebook) during Jan 1- April 10, 2019 with a 15min granularity**
    - [https://api.manic.caida.org/v1/rtt?near\\_org\\_asn=22773&agg=15&start=20190110&end=20190410](https://api.manic.caida.org/v1/rtt?near_org_asn=22773&agg=15&start=20190110&end=20190410)

# Planned: Add congestion data to AS rank
