Spectrum Allocation in the US

contrast...

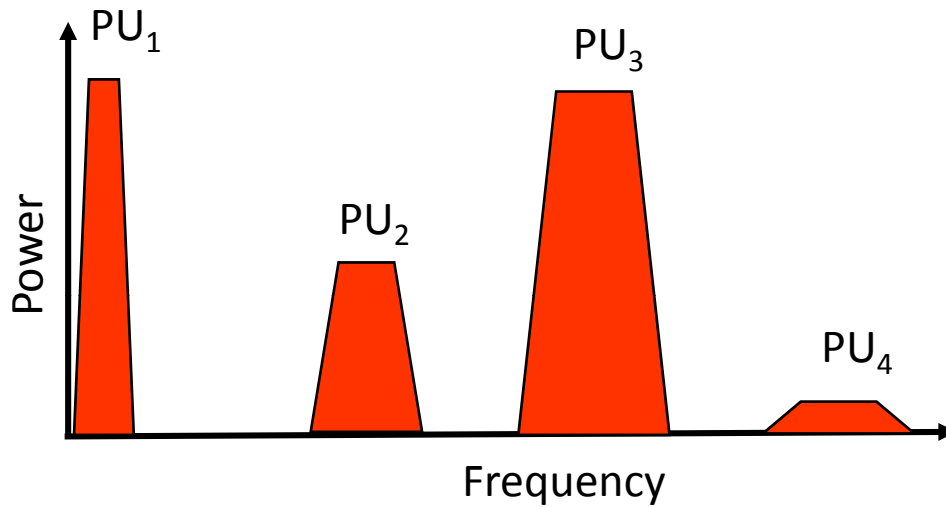

Large portions of spectrum is unutilized

Dynamic Spectrum Access (DSA)

Dynamic Spectrum Access (DSA)

- **Determine** available spectrum (**white spaces**)

Dynamic Spectrum Access (DSA)

- **Determine** available spectrum (**white spaces**)
- **Transmit** in "available frequencies"

Dynamic Spectrum Access (DSA)

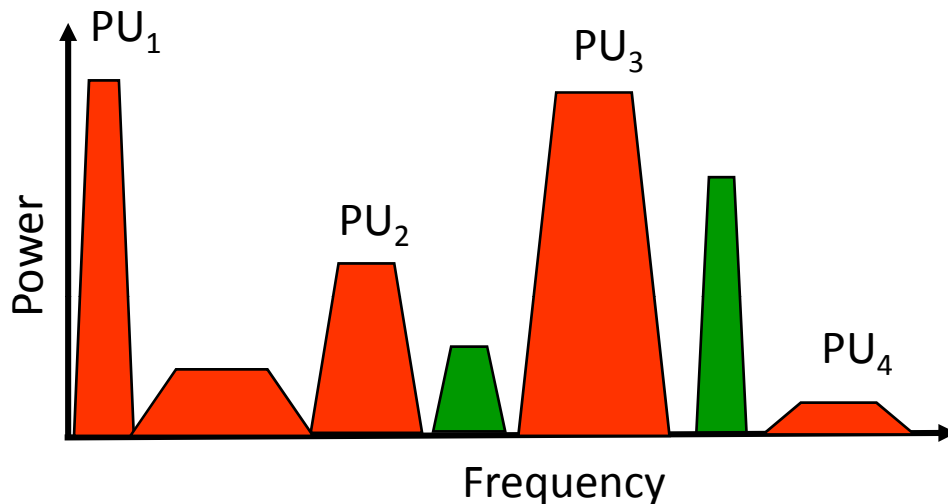

- **Determine** available spectrum (**white spaces**)
- **Transmit** in "available frequencies"
- **Detect** if primary user appears

Dynamic Spectrum Access (DSA)

- **Determine** available spectrum (**white spaces**)
- **Transmit** in "available frequencies"
- **Detect** if primary user appears
- **Move** to new frequencies

Dynamic Spectrum Access (DSA)

- **Determine** available spectrum (**white spaces**)
- **Transmit** in "available frequencies"
- **Detect** if primary user appears
- **Move** to new frequencies
- **Adapt** bandwidth and power levels

SR KNOWS Program (2005 - ...)

1: Ad hoc networking in TV white spaces

DySPAN 2007, MobiHoc 2007, LANMAN

Capable of sensing TV signals, hardware functionality

2: Infrastructure based networking (**WhiteFi**)

Capable of sensing TV signals & microphones, deployed in lab

SIGCOMM 2008, SIGCOMM 2009 (Best)

3: Campus-wide WhiteFi network + geolocation

Deployed on campus, and provide coverage in MS Shuttles

DySPAN 2010 (Top 3 paper), CoNEXT 2011 (Top)

4: White spaces beyond TV spectrum

Spectrum measurements to identify additional white spaces

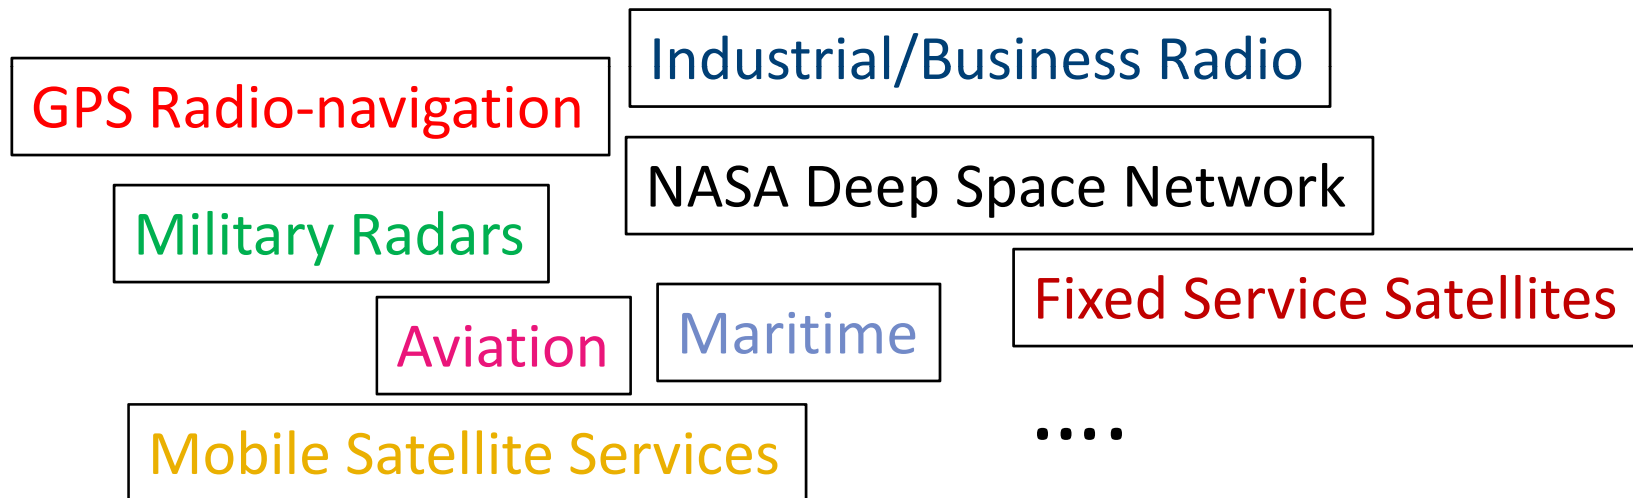

Problem Statement

For a given region, which spectrum bands are best to form DSA networks?

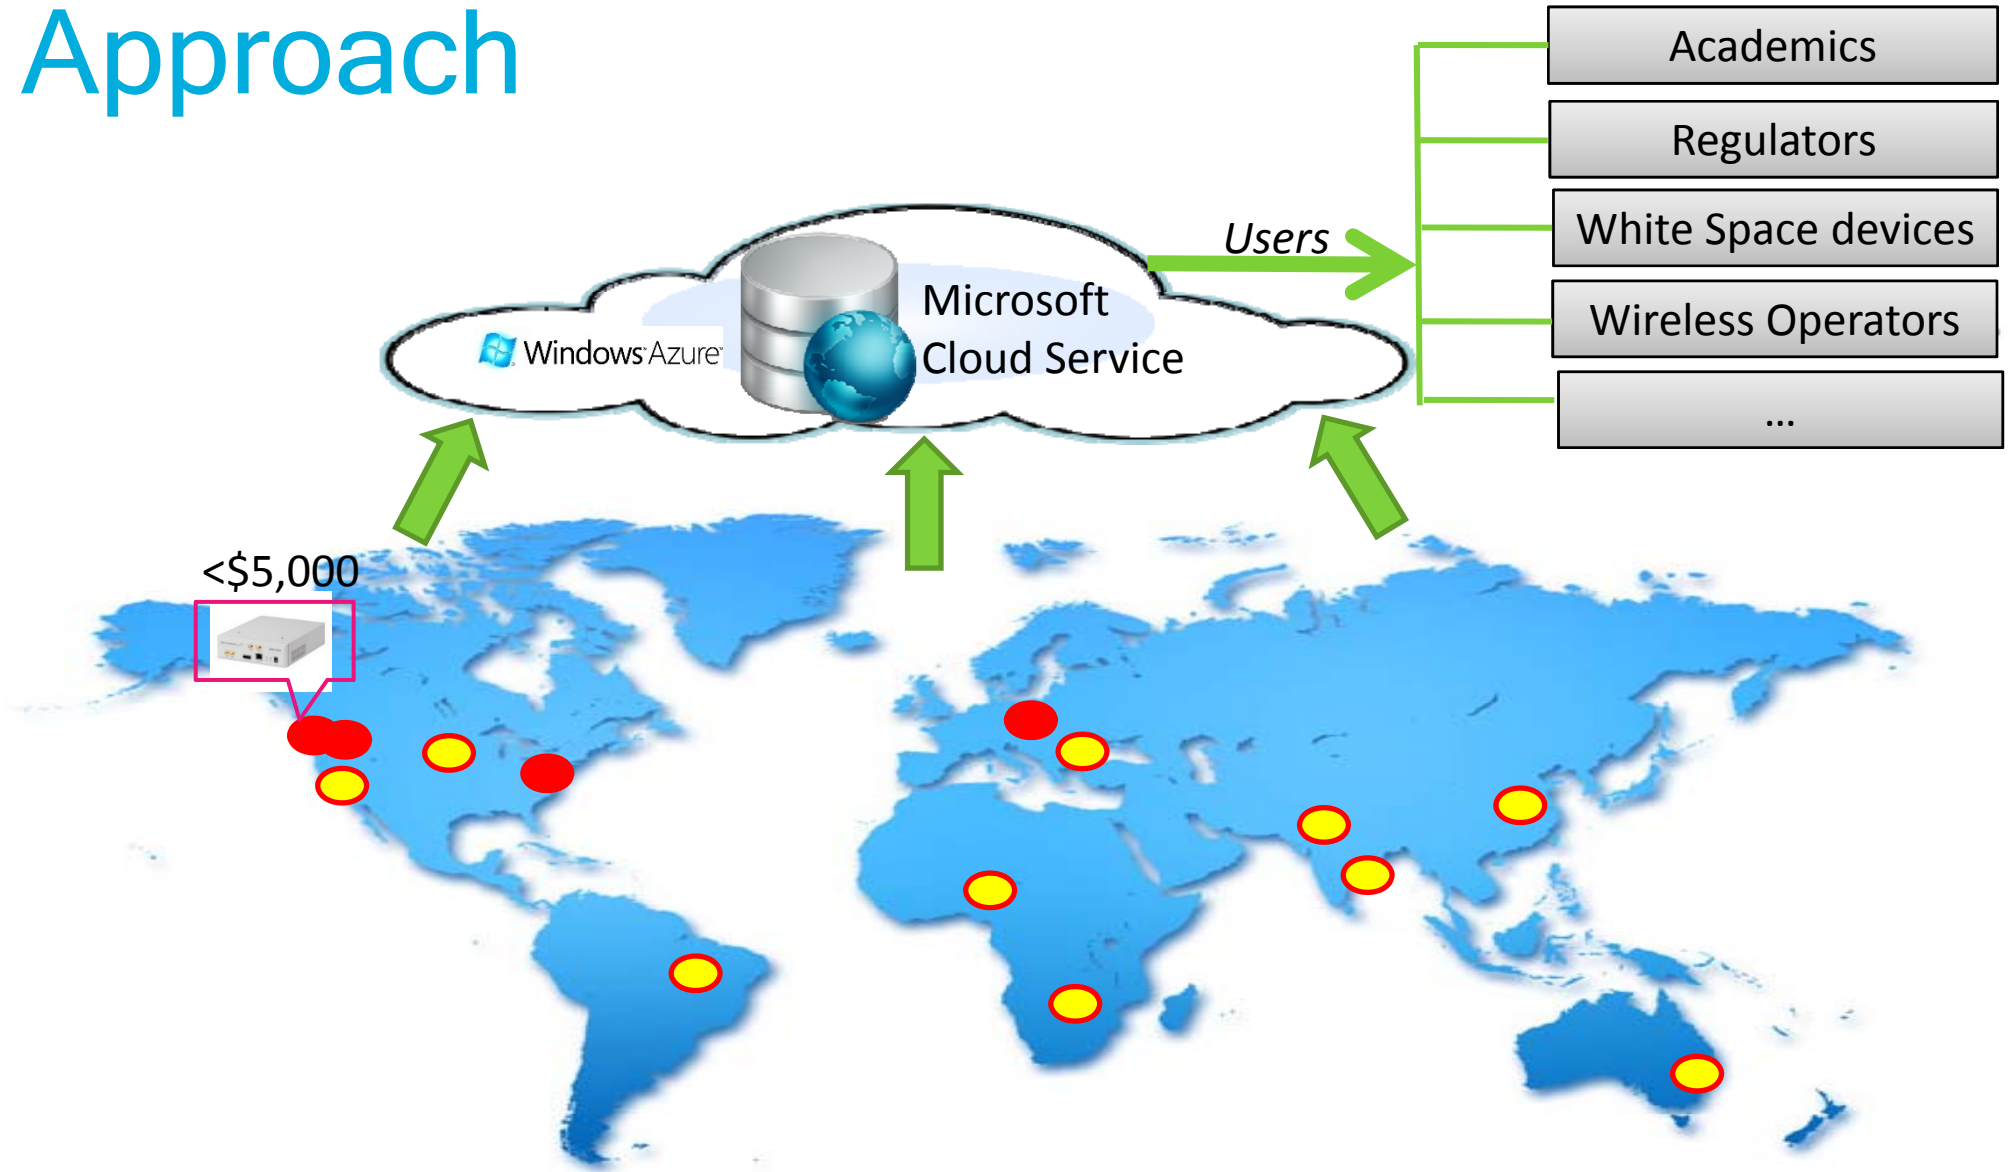

Problem Statement

For a given region, which spectrum bands are best to form DSA networks?

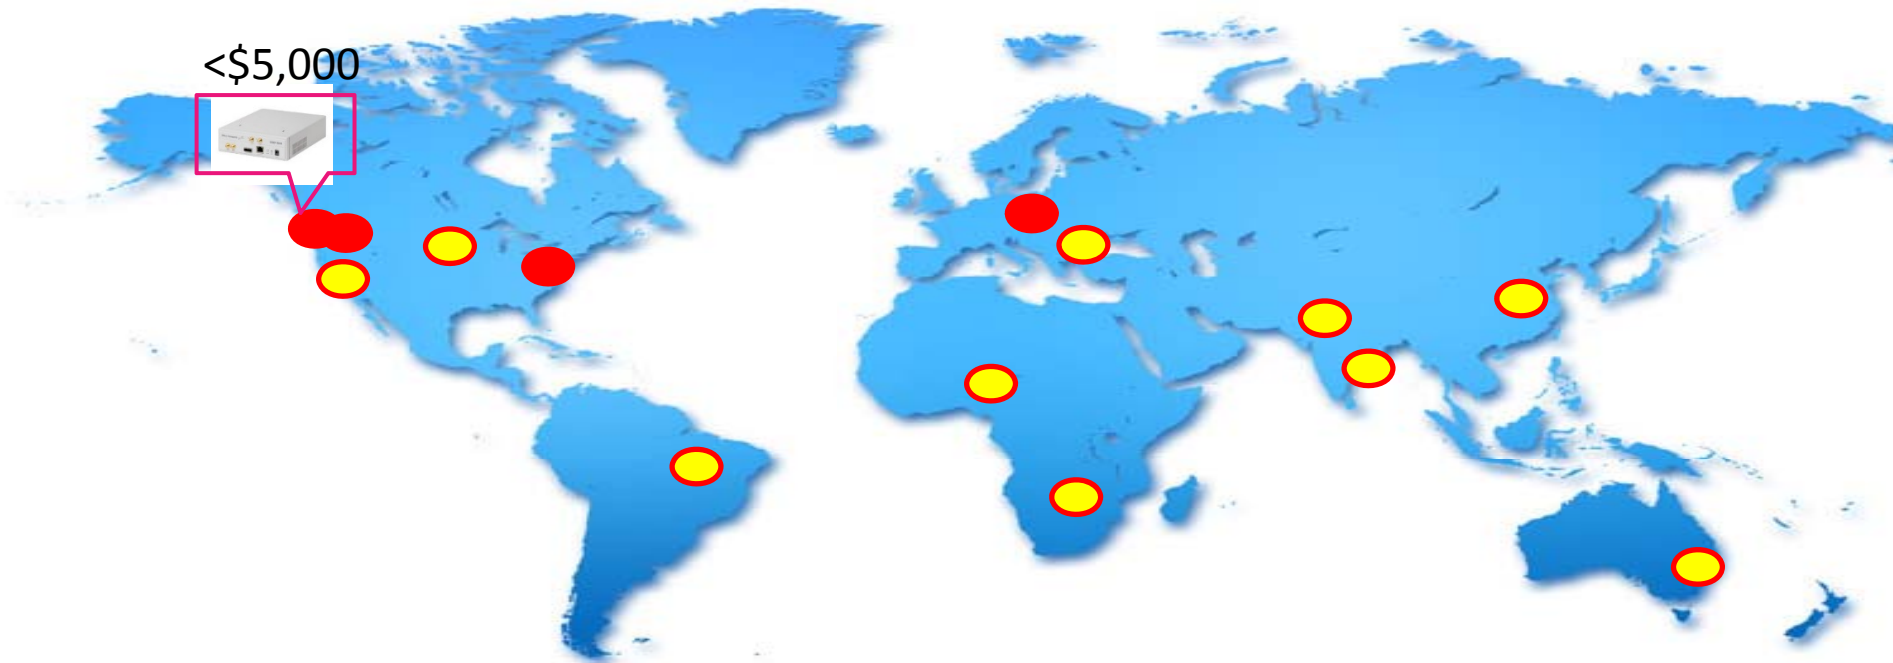

Diverse set of primary licensees, different transmission schemes, coverage regions etc...

Technology Policy Group

The Microsoft Technology Policy Group is currently collecting frequency spectrum usage data from a number of sensor base stations. Select a sensor location to view more detailed reports and graphs about the spectrum usage.

e cases

Policy makers:

- Identify unused portions of spectrum, i.e. good for DSA
- Detect rogue transmissions
- Identify locations of transmitters (in developing countries)

White space devices:

- Dynamically consult with database to decide spectrum for communication

Academics/Researchers:

- Modeling the real world

Summary

<http://observatory.microsoftspectrum.com>

- 6+ active stations, many more in the future
 - Please contact us if you are willing to host a station, or interested in analysis
- *Exciting announcement coming next week at WSRD workshop!*

Ongoing Research

- Fast scanning algorithms (with MIT)
- Detecting unknown transmitters (with UCSB)
- Space-Time-Frequency occupancy using mobile spectrum measurements (with IIT-Delhi)
- DSA metric to identify spectrum most suitable for DSA (with Stanford)
- ...
